EECS 4314 GROUP H

Recovering OpenPilot's Concrete Architecture

Assignment 2 OpenPilot v0.11.1, June 5, 2026

Recover the as-built architecture with Understand and explain the selected subsystem's structure, dependencies, and behavior.

Setayesh Chegini, Spence Hashemi, Mehdi Jafarian, David Odidi, Dan Logvinovsky

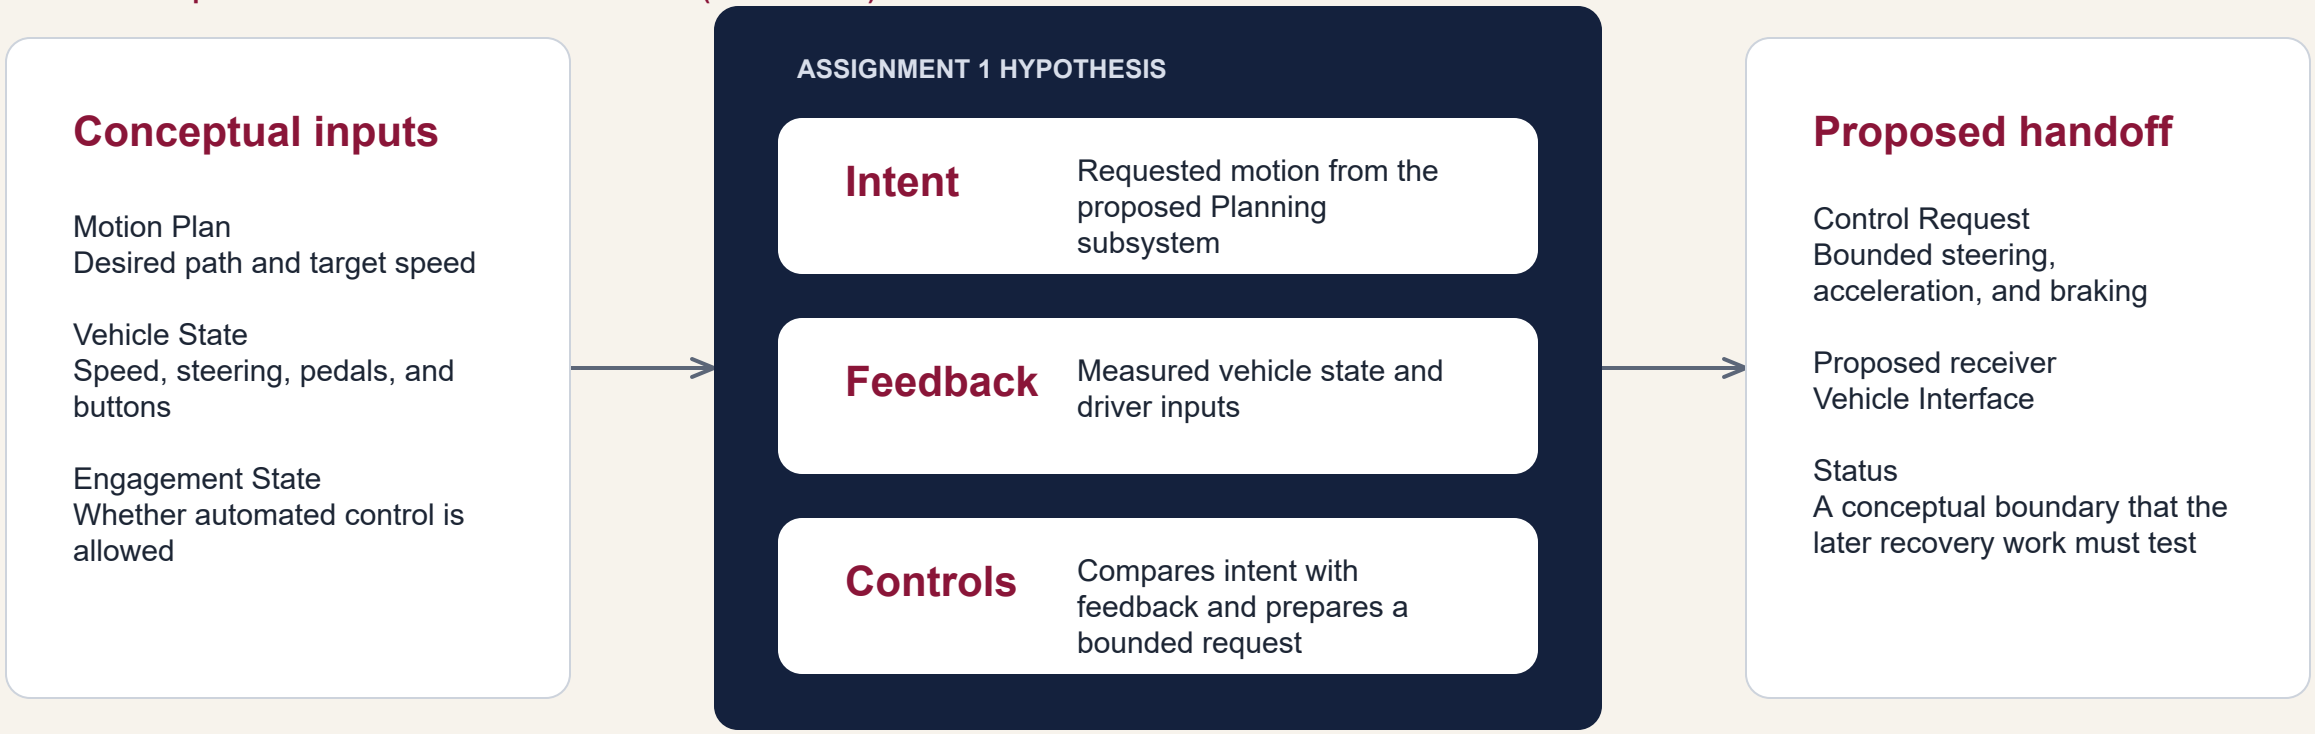
Evidence plan: Understand for static structure; permitted process, messaging, and parameter evidence for runtime coupling

Proposed analysis scope: Controls

Forum confirmation pending

This boundary comes from Assignment 1. It is a starting hypothesis for later analysis, not a recovered result.

Candidate implementation location: selfdrive/controls (unconfirmed)



01

Which implementation entities realize the proposed Controls responsibility?

02

How should those entities be grouped into concrete subsystems?

03

Which static and runtime dependencies cross the recovered boundary?

04

What limitations or unresolved questions remain in the recovered model?

Pre-analysis slide only: no OpenPilot source findings are presented.
Concrete claims will follow the scheduled analysis and a forum-confirmed scope.
